

## **Casey**

- Ran into problem where jQuery was breaking the blog login authentication system
- Ran into problem where the database system can't actually count how many entries were in it without first sending all the information to the client, thus blowing up your browser
- Ran into problem with PayPal IPN service and sandbox account with returning a call to the website that a payment went through
- Need to have a call when the IPN payment is returned to send out an email with the ticket
- Condeplate my life choices
- Move the blog posts javascript out of the HTML file to a seperate one
- Need to minimize said javascript file for a faster loadtime
- Need to somehow get the count from database on the client for pagination of blog posts

## **Nebeyu**

- Ran into a problem where the html code was not formated.
- Need to rename parts of the website that aren't the company name

## **Shamar**

- The HTML code has a problem with getting the timer to start out at 60 seconds
- The HTML code also won't display when the game was over
- The HTML code also allows negative score value which needs to be fixed

Counter.Initialize(60);
